

The Enterprise **Payment Gateway** for Autonomous AI Agents

AgntPymt is the financial control layer giving enterprise AI agents a secure, governed way to transact — with built-in identity, stablecoin settlement, spending controls, and an audit trail.

— THE PROBLEM

Agents Can Act. But They Cannot Transact.

01

No Native Payment Rails

AI agents depend on human-triggered payment flows. There is no infrastructure for autonomous machine-to-machine transactions at enterprise scale.

02

No Governance Layer

Enterprises have no mechanism to set spending limits, policy controls, or approval workflows for AI-initiated transactions.

03

No Audit Trail

Without identity, provenance, or receipts, AI spending is invisible — creating compliance blind spots and regulatory exposure.

— THE SOLUTION

The Financial Control Layer for Autonomous AI Systems

AgntPymt is not a crypto wallet, a payment processor, or an API billing tool — it is a payment gateway purpose-built for autonomous economic activity by AI agents.

Autonomous Payments

Machine-to-machine flows with no human friction.

Governance & Compliance

Spend limits, approvals, and policy controls.

Stablecoin Settlement

Programmable USDC settlement — instant and borderless.

Sovereign AI

Deploy on your own infrastructure. Data stays yours.

— END-TO-END FLOW

— SELECT USE CASES

Enterprise AI Agents Already Need This — Today

Autonomous Procurement

An AI Procurement Agent identifies a lower-cost supplier, validates policy compliance, obtains human approval if required, executes payment, and records the transaction — automatically.

IT Infrastructure Management

An AI Operations Agent provisions cloud resources during peak demand and settles usage-based charges within approved spending thresholds — with zero human touchpoints.

Enterprise Research & Analytics

A Market Intelligence Agent purchases external datasets for business analysis, automatically allocating costs to the appropriate department or project code.

Digital Service Consumption

AI-powered business apps subscribe to third-party APIs, data providers, and SaaS tools — remaining within approved budgets and governance policies at all times.

— TECHNOLOGY FOUNDATION

— SECURITY & COMPLIANCE

Enterprise-Grade Security. Built In From Day One.

Data Encryption & Protection

Encrypted at rest and in transit. Customer-controlled keys. Zero plaintext storage.

AES-256 TLS 1.3 HSM

Compliance Frameworks

Designed to meet leading frameworks with pre-built compliance reporting.

SOC 2 Type II ISO 27001 GDPR MiCA

Zero-Trust Architecture

Every agent, transaction, and API call verified. No implicit trust.

Zero-Trust mTLS RBAC

Immutable Audit Trail

Every transaction cryptographically signed on a tamper-evident ledger.

Blockchain Provenance ERC-8004

Sovereign Deployment

Deploy on your cloud or on-premises. Data never leaves your environment.

Private Cloud On-Prem Air-Gapped

Continuous Security Testing

Third-party pen testing, automated scanning, responsible disclosure.

Pen Testing SAST/DAST Bug Bounty

AgntPymt

The Agent Economy Is Here.

Payment infrastructure must evolve with it.

AgntPymt is the financial control layer that makes autonomous enterprise AI payments possible. Secure. Governed. Auditable. Purpose-built for agents.
